**DETAILED ACTION**

1. This communication is responsive to the amendment dated 08/16/2004.
2. Newly submitted claims 56-63 are directed to an invention that is independent or distinct from the invention originally claimed.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 56-63 is withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3 and 55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Massie et al. (U. S. Pat. - 5,698,807).

Regarding claim 1, Massie et al. disclose a hearing device, comprising: an input signal channel providing digital input signals (58); a signal path adapted to process said digital input signals in accordance with a predetermined signal processing algorithm to produce a digital output signal, wherein said signal path further comprises at least one signal processing function operating on a warped frequency scale (Fig. 2); and an output conversion means adapted to convert said output signals to an audio output as claimed. But Massie et al. do not clearly teach a

Art Unit: 2643

microphone as claimed. Since providing a microphone for an acoustic instrument or device for receiving acoustic inputs is very well known in the art, it therefore would have been obvious to one skilled in the art at the time the invention was made to provide a suitable microphone for the device for providing proper input signals.

Regarding claim 2, Massie et al. further disclose the hearing device, wherein at least one signal processing function further comprises a plurality of cascaded all-pass filters (Fig. 2) as claimed.

Regarding claim 3, Massie et al. further disclose the hearing device, wherein said warped frequency scale approximates a Bark scale (col. 6, lines 45-50).

Method claim 55 is similar to claims 1-3 except for being couched in method terminology, which would be inherent when the structure is shown in the references.

#### ***Response to Amendment***

4. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

#### ***Conclusion***

5. Applicant's amendment necessitated the new grounds of rejection. Accordingly, **THIS ACTION IS MADE FINAL**. See M.P.E.P. § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 C.F.R. § 1.136(a).

IN THE EVENT A FIRST RESPONSE IS FILED WITHIN TWO MONTHS OF THE MAILING DATE OF THIS FINAL ACTION AND THE ADVISORY ACTION IS NOT MAILED UNTIL AFTER THE END OF THE THREE-MONTH SHORTENED STATUTORY PERIOD, THEN THE SHORTENED STATUTORY PERIOD WILL

Art Unit: 2643
